APPENDIX	15

FORTY-FIRST ANNUAL REPORT

OF THE

BOARD OF SUPERINTENDENCE OF THE DUBLIN HOSPITALS.

TO HIS EXCELLENCY THE RIGHT HON. GEORGE
HENRY, EARL CADOGAN, K.G.,

Lord Lieutenant-General and General Governor of Ireland.

35, Dawson-street,
10th June, 1899.

MAY IT PLEASE YOUR EXCELLENCY:

We have the honour to lay before you the Forty-first Annual Report on the condition and management of the Dublin Hospitals which receive Parliamentary grants, and which were duly inspected by us during the year ending 31st March, 1899.

These are —

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz. :—
 - a. Hardwicke Fever Hospital.
 - b. Whitworth Medical Hospital.
 - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. The Royal Victoria Eye and Ear Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

On making these inspections, we carefully inquired as to the state and condition of each Institution. We endeavoured to ascertain if the general management was satisfactory and if due provision was made for the comforts of the patients, and if the food was prepared in a careful and economical manner and presented in a palatable form.

We have seen every patient in the Hospitals and have interrogated those who appeared most helpless to ascertain if proper care was bestowed on them.

We inquired into the nursing arrangements, and to the available means in each Hospital for the extinction of an outbreak of fire, and such other matters as are essential to the welfare and safety of the inmates, in order to report thereon in detail in accordance with Act 19 and 20 Vic., cap. 110.

With the object of more effectively dealing with the cure and the prevention of disease, we were pleased to find that bacteriological investigations are, at the present time, earnestly engaging the attention of the Medical Authorities.

As previously stated in a former Report, most of these Hospitals admit applicants without any recommendation, and merely from being considered on examination by the Medical attendants to be fit objects for treatment. With regard, however, to the admission of certain cases of pulmonary phthisis into general wards, we are of opinion that in the interest of other patients, and of the community at large, it would be desirable for the Local Government Board to provide special sanatoria in suitable localities for the separate treatment of such patients. If this scheme could be carried out it would greatly relieve the pressure on the City Hospitals, and the expenditure involved would in the end prove an economy, and prevent the spread of tuberculous diseases.

We venture also to suggest that the public should be informed by the authorities of the ways in which tuberculous diseases may be disseminated, and the means by which they may be obviated.

We cannot forbear adding that it would be advisable that strict sanitary legislation should be enforced in regard to public conveyances, and also to churches, school-rooms, theatres, factories, markets, and dairy-yards, and other buildings where large assemblies of people are gathered together.

The various Statistical and other Tables in Appendices will be found similar in character to those that have hitherto appeared in regular annual sequence, but at the same time indicative of the relative changes and results in the operation of the different institutions.

The financial accounts are rendered on a uniform system, so that it can be seen whether any Hospital is extravagant in its expenditure as compared with others.

The figures generally afford a satisfactory proof that the governing bodies are showing a due regard to economy in the arrangements for the maintenance of patients in the several Hospitals under their management.

From the records and vouchers that have come under our notice, it is evident that great care is taken in the making of contracts, and that the goods supplied are scrutinized, so as to ensure that they are equal to standard and not deficient in quantity.

On the 1st of April, 1899, there remained 992 patients in these Hospitals under the supervision of our Board.

The number admitted during the year was 11,492, making the whole number under treatment 12,484, of whom 10,991 left the wards either cured or relieved, or were discharged for other causes, and 498 died.

Nine hundred and ninety-five remained under treatment in these Hospitals on the 31st March, 1899.

Exclusive of incurables, the mortality was 4.1 per cent. on those treated to a termination.

The total daily average number of beds occupied in these Hospitals throughout the year was 952.63.

The time spent in Hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 23.42 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several Hospitals and the number that died of any particular disease during the year ended 31st March, 1899.

Table No. 2 shows the average cost per bed occupied throughout the year ending 31st March, 1899, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each Hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each Hospital.

Table No. 5 gives the number of patients treated in each Hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each Hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each Hospital.

Table No. 8 gives the names of the Governors of each Hospital, and number of attendances during the year.

We wish to call the attention of the wealthy inhabitants of Dublin to the many needed improvements in these Hospitals, which are worthy of attention and assistance; but as in many cases available funds are insufficient for effecting these advances, we hope that such help may be afforded as may enable these institutions to keep out of debt, and to carry out their beneficent work to the advantage of the whole community.

WESTMORLAND LOCK HOSPITAL.

We have not much to notice in this Hospital as having been effected in the way of alteration or improvements since our last inspection. We found it in a satisfactory condition as regards the comforts of the patients, and no complaint was made to us during our visit as to the want of attention on the part of attendants.

The cooking, and the distribution of the diets are conducted according to regulation. The quality of the food is good, and the returns and vouchers in connection with expenditure are accurately kept.

The beds and bed-clothes were clean and in order, and white quilts were in use, by which arrangement soiling is at once observed and the want of a change immediately indicated.

We regret to have observed in one ward, a press containing soiled linen. This arrangement is objectionable, and we hope some better provision may be made to remedy this insanitary condition. We have frequently pointed out in previous Reports that soiled linen should not be kept in wards or allowed to accumulate in lobbies, bath-rooms or closets attached to the wards.

The senior Surgeon to this Hospital, who is himself a member of this Board, states:—

(a) "That the clothes supplied to the patients as being insufficiently warm for patients under specific treatment, and that the uniform which they are required to wear partakes too much of the character of prison clothes; it is therefore distasteful to the patients, and tends to prevent them from availing themselves of the benefit of the Hospital in the early stages of venereal disease.

(b) The appliances for the examination and treatment of the patients are old-fashioned and behind the time.

(c) Antiseptic treatment, which is essential in order effectually to deal with venereal diseases, is impossible at present in the Hospital, owing to the want of the necessary appliances to enable the surgeons to carry it out.

(d) The nurses, although respectable, painstaking women, have received no regular training and are uncertified, with the exception of the Maternity Nurse, who holds a midwifery diploma. This state of things militates against the efficiency of the Hospital in checking venereal diseases. It deters patients from seeking early admission, and tends to make them seek treatment outside the Hospital. The Board of Governors plead insufficiency of funds as their reason for not being able to remedy these defects."

The Matron discharges her duties with much zeal, and continues to exercise a judicious avoidance of irksome discipline in the management of the inmates.

There were 54 patients in this institution on the 1st April, 1898; 417 were admitted, and 11 infants were born in the house during the year; 396 were discharged; 14 died; and 72 remained on the 31st March, 1899.

The mortality was 3·4 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 50 days, and the average daily number of beds occupied during the year was 66·87.

STEEVENS'S HOSPITAL.

We have pleasure in stating that this Hospital continues to be maintained in a state of efficiency which is creditable to all concerned.

We have in the course of our inspection gone over the whole building, and found the wards and corridors in a very satisfactory condition. The rations were of good quality, and the kitchen accommodation and cooking utensils sufficient and in order.

We examined the surgical appliances and the instruments under the care of the Resident Surgeon, and found them in good order and well arranged. We were informed that at all times careful precautions are taken for immediate treatment of cases of poisoning. We recommend, however, that a toxicological chart be hung up in a conspicuous place, which would show at a glance the antidotes and appropriate measures indicated in such cases. For, notwithstanding a careful toxicological training, a medical officer, in the hurry of an emergency, might find his memory fail him. The Resident Surgeon discharges his professional duties with conscientiousness, and with much ability; but we are of opinion that it is worthy of consideration whether it would not be advisable to appoint in addition a junior house surgeon, so that in the absence of one qualified medical officer the other should remain on duty in the Hospital.

Within the last few years the Governors found it necessary to remodel the whole sanitary arrangements, and among other recent improvements the following may be noted:—

The operating theatre has been completely reconstructed upon the most modern principles, so as to secure complete asepsis in operating, and two wards have been annexed to it for the reception of patients after serious operations; this has entailed an outlay of nearly £2,000.

A large destructor or crematorium has been erected, in which contaminated articles of dressings are destroyed.

A pathological laboratory has been established, and also a complete apparatus for taking skiograms by the Röntgen process, now so largely used for the detection of fractures and foreign bodies.

A new laundry, fitted with the most modern and complete equipment, has recently replaced the old and defective one. In connection with this department, we have ascertained that the clothes are as much as possible dried and aired in the open air, and that articles used by patients affected by contagious diseases are steeped, boiled, and washed separately.

The increasing demand for trained nurses had rendered it obligatory on the Governors to greatly extend the nursing staff, and as suitable accommodation could not be obtained for nurses and probationers in the main building without still further encroachments on the wards intended for the use of the sick poor, a new Nurses' Home is now in course of erection, and has nearly reached its completion. This, however, has entailed a cost of more than £5,500, of which a very large balance must still be made up.

The new Home is intended to accommodate fifty nurses and probationers, separate quarters being provided for those attending infectious diseases.

On the 1st April, 1898, 104 patients remained in Hospital; 1,352 were admitted during the year; 1,298 were discharged; 38 died; and 120 remained at the close of the year.

The mortality was 2·8 per cent. on the total treated to a termination.

The time spent in Hospital by each patient averaged 26·27 days, and the average daily number of beds occupied during the year was 104·79.

THE MEATH HOSPITAL.

The result of our inspection of this Hospital was to confirm the opinion expressed in previous Reports as to the energetic and progressive spirit in which it is managed. The medical and surgical work of the Hospital has always been of a high order, and the records of cases show the care and attention bestowed on the patients; the nurses under the Lady Superintendent, we have been informed, are kind, capable, and assiduous in discharging their duties. During the past year every department has been maintained in an efficient state. The kitchen and cooking arrangements have been carefully attended to. The provisions are of the best quality.

The permanent improvements which we alluded to in our last year's Report as being in progress are now completed, and have left nothing to be desired in point of efficiency.

These consist of:—

(1.) A new male accident ward, containing 12 beds, fitted with separate bathroom, lavatory, &c. The ward is lofty and admirably ventilated and lighted, and suitably furnished.

(2.) A new operating theatre, which is in every respect up-to-date, and fitted with all modern requirements.

(3.) The laundry has been remodelled and enlarged, and provided with all necessary machinery, &c.

(4.) A new steam boiler has been erected, which supplies steam and hot water to the laundry, heats the theatre, and sterilizes the water used in operations. A new hot water circulating system for supplying the baths, &c., throughout the Hospital has been provided, which also is heated from this new steam boiler.

We find the sum of £3,589 has already been paid on account of these improvements, leaving a balance still due of about £300.

We were pleased to be informed that, since the first announcement of the discovery of the X Rays, the Röntgen Ray Skio-graphic investigation has been carried out at this Hospital, and has contributed much to the alleviation of suffering and to the more accurate diagnosis of many of the more obscure forms of disease and injury.

There were 111 patients in this Hospital at the commencement of the year; 1,148 were admitted; 1,077 discharged; 70 died; and 112 remained on the 31st March, 1899.

The mortality was 6·1 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 27 days, and the average daily number of beds occupied during the year was 93.12.

CORK STREET FEVER HOSPITAL.

The inspection of this Hospital enables us to give a favourable report of its general condition. We found every department maintained in an efficient state, and that order and neatness pervaded all arrangements throughout.

We found the patients suitably provided for, and every effort appears to be made to render them as comfortable as possible.

We ascertained that provision exists for the isolation of certain forms of infectious fever, and that there is a separate detached apartment where discharged patients are bathed and receive their own clothing thoroughly disinfected previous to returning home.

The drainage of the Hospital and of the Beneavin Home has been inspected by the Dublin Sanitary Association, and found in perfect order. Alterations have been made in the plumbing arrangements of the Red House, and the passages and the wards have been recently painted, which adds much to the appearance of the Hospital.

We have been informed that the Managing Committee have approached the landlord of dairy yards adjoining the Hospital with a view to purchase the premises, which will afford ample space to build a suitable house for the nursing staff, and which will enable the Managing Committee to erect a ring fence round the institution.

Towards the latter end of the financial year, the number of patients having diminished, the Committee were enabled to send out to Unions and private houses a few of their disengaged nurses. Application had often been made previously to supply nurses to the public, but their services were so much required in the Hospital that it was found not possible to spare one.

The Hospital supplies were of good quality, and the returns and vouchers in connection with their expenditure accurately kept.

We consider the Matron is deserving of much praise for the neat and systematic arrangement of the store-room.

If funds were available we suggest as an improvement the replacement of the present baths in use by the porcelain ware pattern, which is specially adapted to ensure cleanliness and would obviate the necessity of frequent painting.

At the commencement of the year 187 remained in the Hospital; 2,023 were admitted; 1,893 were discharged; 166 died; and 151 remained on the 31st March, 1899.

The mortality was 8.06 per cent. on those treated to a termination.

The average daily number of beds* occupied, including Beneavin Convalescent Home was 165.91, and the time spent in Hospital by each patient averaged 27.4 days.

HOUSE OF INDUSTRY HOSPITALS.

It is evident that great energy and earnestness is shown in the general management and administration of this Institution, and valuable opportunities are afforded by each Hospital for promoting medical education.

We found the wards clean and in order, and the various articles of food, including bread, meat, beef tea, and milk, &c., without exception, of good quality.

The assiduous attention of the Lady Superintendent to the requirements of the patients and the devotion of the nursing staff to their duties, leaves nothing to report but what is satisfactory.

We examined the medical and surgical records, which are carefully kept, and which show in the most satisfactory manner the care and attention which is bestowed on every detail of treatment by a medical staff of distinguished ability. We are of opinion that, as a matter of discipline and for scientific requirement, a regular, systematic, and thorough habit of case-taking should be insisted on in all Hospitals.

We have ascertained that great care is taken that everything should be in readiness for any emergency in case of poisoning, and that the various appliances and antidotes are kept ready for immediate use.

We found the general stores arranged with order and neatness under the care of the Sister in charge, and that strict economy is constantly kept in view, and that nothing is permitted to be lost or wasted.

We are unable to report as fully as we could wish on the new erection which is to replace the Richmond Hospital; but considerable progress has been made with the building, and it is expected to be in occupation next year. So far as we can at present judge it will not be surpassed by any similar Hospital in the United Kingdom in respect to completeness and efficiency.

We were informed that pathological research is as far as possible carried out, and that a fair amount of microscopical work is done, but we hope that better arrangements may be made for the prosecution of bacteriological research, now so essential in Hospitals, and for which we doubt not the Governors will provide the necessary room and appliances.

We are glad to be able to report that many of our former suggestions have been adopted and carried into effect; those not as yet acted on, will, we feel sure, receive due consideration at the hands of the Governors.

HARDWICKE FEVER HOSPITAL.

Fifty-five patients remained in Hospital on the 1st of April, 1898; 676 were admitted during the year; 619 were discharged; 53 died; giving a mortality of 7·20 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 49·42, and the time spent in Hospital by each patient averaged 30·76 days.

WHITWORTH MEDICAL HOSPITAL.

On the 1st April, 1898, 47 patients remained in Hospital, 704 were admitted; 661 were discharged; 46 died; giving a mortality of 6.50 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied was 38.93; and the time spent in Hospital by each patient under treatment averaged 18.68 days.

RICHMOND SURGICAL HOSPITAL.

There were 59 patients in this Hospital when the year commenced; 826 were admitted; 789 were discharged; 39 died; giving a mortality of 4.71 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied in the year was 55.80; and the time spent in Hospital by each patient averaged 20.47 days.

ROTUNDA LYING-IN HOSPITAL.

We were much gratified by the order, regularity, and cleanliness which prevailed, and by the kindness and attention bestowed on the patients.

The wards were bright and well ventilated, and the beds and bedclothes were properly attended to.

We ascertained that the soiled linen is promptly removed from the wards, tied up in bundles, and placed in the foul linen shaft, and from thence is daily carried to the laundry. The washed clothes are returned from the laundry in baskets, and conveyed to each storey by a special lift without coming in contact with the contaminated articles.

We are of opinion that some improvement might be made for the better ventilation of this shaft, and that it would be advisable to have it periodically disinfected. Other parts of the buildings appeared in good order, and the drainage is said to be efficient.

We were particularly pleased with the gynecological department, in which a large number of cases are treated annually. This building consists of three stories, each of which is connected by corridors with the corresponding level of the Lying-in-Hospital. It contains five well-ventilated wards, having sixteen beds each, and three smaller wards for special cases. The bathrooms and lavatories are of the most approved description.

The operating theatre is equipped with the most modern appliances, and seems admirably suited to the objects for which it has been designed.

Many minor matters in the way of renovation and decoration are under the consideration of the Governors, and we have no doubt that these improvements will soon be carried out.

As a school for giving instruction in Midwifery and for the diseases peculiar to women it holds the highest reputation, and the renown of its clinical teaching continues to attract a large number of students from all parts of the world.

On the 1st of April, 1898, there were 40 patients in the labour wards; 1,786 were admitted during the year; 281 were discharged not having been delivered; 5 died; and 40 remained in the Hospital at the end of the year.

Thirty-three patients remained in the auxiliary or chronic department on the 1st of April, 1898; 559 were admitted; 548 discharged; 14 died in the year ended 31st March, 1899, and 30 then remained.

The average daily number of beds occupied throughout the year by labour cases was 40·87, and that of the chronic class was 29·95.

The time spent in Hospital by labour cases averaged 8·1 days, and that by the chronic class 18·47 days.

The mortality in the labour wards, deducting non-parturient cases, was, 0·33 per cent., and that of the chronic class 2·4 per cent.

COOMBE LYING-IN HOSPITAL.

The state of the wards and the condition of the patients were satisfactory in view of the difficulty of the management which arises out of the limited resources of the hospital. It merits a liberal support, not only on account of the benefit it confers on the poor, but also on the advantages it affords in forwarding medical education. As the district in which it is situated is very poor and densely populated, we were glad to be informed that a comprehensive scheme has recently been initiated by Lord Ardilaun, Lord Iveagh, and Mr. James Talbot Power, who have obtained an Act of Parliament to convert an insanitary area in the vicinity of the Hospital into a public garden. This undertaking will prove beneficial to a large number of extern labour cases who are annually attended in this neighbourhood by students from the Hospital.

It is the intention of the Guardians and Directors to provide additional accommodation for nurses, which will enable a larger number to be trained in the Hospital.

We believe that this special branch of nursing is much required throughout the country, and it is probable that it will assume additional importance owing to the fact that many appointments are likely to be made under the Local Government Board new regulations.

We consider there is much need for a hot air chamber or a fumigating apparatus for disinfecting patients' clothes previous to being stowed away. We have no doubt this matter will receive due attention from the Guardians and Directors.

We were informed that the supply of linen is now ample, a matter of great importance, as it permits the clothes to be retained sufficiently long at the laundry for thorough washing and purification.

On the 1st April, 1898, there were 17 patients in the labour wards; 609 were admitted during the year; 155 were discharged, not having been delivered; 2 died; and 21 remained in the Hospital at the close of the year.

Nine patients remained in the chronic wards on the 1st of April, 1898; 207 were admitted; 201 were discharged; 3 died; 12 remained at the end of the year.

The average daily number of beds occupied throughout the year by labour cases was 13.78 and that by chronic cases 14.09.

The time spent in Hospital by labour patients averaged 803 days, and that by the chronic class 23.8 days.

The mortality of patients admitted to the chronic wards was 1.47 on those treated to a termination, and that of the labour class was 0.4 per cent.

THE ROYAL VICTORIA EYE AND EAR HOSPITAL.

We visited St. Mark's and the National Eye and Ear Infirmary, which have recently been amalgamated, and now constitute the "Royal Victoria Eye and Ear Hospital." This institution is doing a good deal of useful work, so far as structural defects admit; the Council are, however, anxious to procure a suitable site for the erection of a new Hospital, the plans of which we are confident will be carefully and judiciously considered, so that every detail may be arranged after the most modern methods, and with a view to economy in its management. The success of this undertaking will depend on the liberality of the public, and we hope that the founders may soon be able to extend the charitable objects for which it is intended. There can be no doubt that it will prove highly valuable as a means of enabling students to acquire a more extended knowledge of the diseases of the eye and ear, and also of alleviating the sufferings endured by the poor.

The records of cases are kept with care, which must be of great advantage for future reference.

We regret that a serious accident should have occurred in the Molesworth-street branch of this Institution in November last, as a result of which a patient died. It appears that an old man who had been successfully operated on for cataract, opened a window on the first floor during the night (while suffering from mental derangement), got out through it, and fell to the ground, sustaining a fracture of the leg. The best surgical aid was obtained for him, but the unfortunate man died of pneumonia a week afterwards.

We hope that means may be taken to prevent the recurrence of such an accident, and consider that a nurse should be constantly on duty at night time.

On the 1st of April, 1898, 60 patients were in Hospital; 1,118 were admitted during the year; 1,116 were discharged; and 61 then remained.

The average daily number of beds occupied during the year was 69, and the time spent in Hospital by each patient averaged 21·4 days,

One death occurred in the Hospital during the year,

THE ROYAL HOSPITAL FOR INCURABLES.

We found this Hospital in all its arrangements and equipments in admirable order and efficiency.

The medical care and treatment of the patients was very satisfactory, and much liberality is shown in the efforts to promote as far as possible their general comfort and well-being.

The Governors are entitled to great credit for the energy they have evinced in the maintenance and management of this useful and charitable institution.

The large wards devoted specially to cases of consumption and cancer merit our highest approval, these class of cases being those which engage the principal attention of the medical and surgical staff of this most important Hospital.

Two hundred and sixteen patients remained in Hospital on the 1st of April, 1898; 56 were admitted; 9 were discharged, resigned or went out on pension; 47 died during the year; and 216 remained on the 31st March, 1899.

The time spent in Hospital by each patient averaged 281·93 days.

The average daily number of beds occupied throughout the year was 210·1.

We have the honour to be

Your Excellency's obedient, faithful servants,

POWERSCOURT, *Chairman.*
